

TREASUREBLOX WHITEPAPER V1.0

The document is a description of the project, explaining the tokenomics, safety measurements, and long-term plans. Revisit this Whitepaper and come back for live updates in the future!

TREASUREBLOX?

TreasureBlox is the World's first crypto and real world treasure hunt.

Players use BLOX to enter treasure hunts where you find clues and solve riddles to win the treasure pot.

TREASURE!?! HOW DO I WIN?

Players will need to purchase BLOX from pancakeswap to enter the treasure hunts
<https://pancakeswap.finance/swap?outputCurrency=0x845f23Ae63b5d03a363f216Ce0BAD4FB12259930>

They then open the DAPP (<https://treasureblox.finance>) and select the treasure hunt they would like to enter. The player then pays a one time fee in BLOX to enter the hunt.

After entering the hunt players can apply for a time lock. A time lock is a 90 second slot where a player can enter the answer to the riddle - no other player can attempt to win during this period. The time lock was implemented to prevent bots stealing players' answers and front running them, beating them to the treasure pot.

If a player enters the wrong answer they can still attempt to solve the riddle whilst their time lock is active.

If a player enters the right answer - congratulations! You have won the treasure pot! This treasure hunt is now over - but for those who didn't win, don't worry! There are lots of new, exciting hunts in the pipeline.

TOKENOMICS

Contract Function	Player %	Marketing & Audit Wallet %	Main Treasure Fund %	Burn Rate %	Dev Tax%
Token Transfers (Buy/Selling)	90%	2%	3%	3%	2%
Treasure Hunt Entry	-	-	95%	-	5%
Time Lock	-	2%	93%	3%	2%
Pot Attempts (Submit a Secret)	-	2%	93%	3%	2%

Player % - the percentage a player receives for transferring, purchasing or selling BLOX.

Marketing & Audit Wallet % - used for Marketing and Future Audits.

Main Treasure Fund % - used for treasure pots.

Burn Rate % - tokens burnt from total supply.

Dev Tax % - project development and founders.

BLOX is deflationary as 3% is burnt from the total supply during all transactions excepting hunt entry.

The main treasure fund is allocated by the Treasure Blox Team for future treasure hunts and live games. When a game is made live the funds will be transferred to a live game wallet.

Increasing the size of the treasure pot as attempts are made will attract more players and help the project grow.

TOKEN ALLOCATION

- 1,000,000 tokens minted on project launch
- 35% retained for developer wallet and core team
- 5% for treasure fund
- 60% allocated to liquidity

PROJECT INTEGRITY

During the development of TreasureBlox, several features have been implemented to prevent malicious actors exploiting vulnerabilities.

1. Fraudulent projects running on BSC often have unlocked liquidity. The TreasureBlox token has locked liquidity.
2. The treasure fund wallet and Active treasure pots have been separated so only live treasure hunts can be interacted with. This protects the treasure fund wallet.
3. The time lock was implemented to prevent bots stealing players' answers and front running them, beating them to the treasure pot.
4. Taxes on transactions prevent bots repeatedly submitting answers during the time lock phase.
5. If the treasure fund wallet becomes too large, additional treasure fund wallets will be created to avoid having the entire treasure fund concentrated in one wallet.
6. TreasureBlox uses a proxy contract so we can develop the project further as it evolves.

PROPOSED ROADMAP

LAUNCH - AUGUST / SEPTEMBER 2021

- Launch V1.0 DAPP
- Launch BLOX token
- Publish Whitepaper
- Engage in marketing of TreasureBlox
- Build a telegram community
- Launch first treasure hunt within 7 days

OCTOBER / DECEMBER 2021

- Create and release treasure hunts as the project grows
- Grow the community

2022

- Contract Audits
- IOS and Android application development linked to the BLOX token
- Run a Beta test of applications
- Launch IOS and Android application
- Create real world TreasureBlox hunts, partnering with organisations
- Potential exchange listings
- Cross chain utility

FURTHER BLOX INFORMATION

Network: Binance Smart Chain (BEP-20)

Ticker: BLOX

Contract address: 0x845f23Ae63b5d03a363f216Ce0BAD4FB12259930

Main Treasure Fund: 0xbb4e46e5407d69b7a8e5948703C7bf3214f84295

Live Game Fund: 0x2CF95A326A80A5268Ec16fE7CD3018de7292D7f7

Marketing & Audit Wallet: 0x0192f33F0C86A53FC01FE8319Ea060f566FCFc31

Dev Wallet: 0xD10283b232c43924BCc2834bd73F811918851f3C

Decimals: 18

Total Supply: 1,000,000
